Pexip Virtual Courts

Across the globe, judiciaries trust Pexip to deliver technology for virtual and hybrid court hearings, video arraignments, virtual interactions in corrections systems, and policing, including tackling case backlogs created by the COVID-19 pandemic.

Pexip Virtual Courts enables the following:

- Tailored experiences enabling “true-to-life” court flows
- Support for unlimited number of court flows
- Custom branding for improved end-user experience
- Separate End-user and Court system workflows
- Flexible deployment options for privacy and compliance
- APIs for scheduling, authentication, agent and reporting/compliance, including integration into existing business workflows
- Integration support for recording and streaming
- Investment protection by leveraging your existing video estate

Judicial workflow using Pexip Virtual Courts

Before the hearing

This workflow shows how easily judicial staff can schedule proceedings: book a date for the hearing, book a judge, set a time, select hearing type, invite participants into the hearing by various groups e.g. Defense, Prosecution, Witness, and Press, etc.

During the hearing

The right court workflow is selected for the specific hearing depending on the hearing type chosen in the scheduling tool. Judges have full control over the proceeding and who participates. Defense and prosecution teams remain separate in private, virtual waiting rooms. The judge can then move these groups (or individuals, such as witnesses), between private waiting rooms and the virtual courtroom at any time during the proceeding.

After the hearing

Once a hearing ends, a video recording is automatically sent to participants and stored for compliance and audits. This recording includes the session date and time, as well as participant data. For compliance reasons, there is also an audit log.
