

# Pexip for Government & Public Administration

Sovereign, secure, and interoperable video collaboration for European public institutions.

## In European public administration, trust is non-negotiable — and so is sovereignty.

From inter-ministerial briefings to citizen-facing digital services, video is now a critical channel for how governments operate, serve, and collaborate.

Built for European public institutions, Pexip deploys within sovereign infrastructure — from private and government-cloud environments to fully air-gapped deployments — delivering data control, regulatory compliance, and seamless interoperability aligned

## Your meeting. Your data. Your control.

Pexip Secure Meetings gives government organisations secure, scalable, interoperable video — on their terms.

### Sovereign

Deploy self-hosted, in a sovereign or government cloud, or fully air-gapped, with no dependency on third-party infrastructure. Full ownership of data, infrastructure, and access policy.

### Resilient

Maintain call quality and service continuity when it matters most. Built to handle network disruptions, demand spikes, and changing operational requirements without compromising performance.

### Interoperable

Connect meeting rooms, video systems, and collaboration platforms without replacing existing infrastructure. Native support for SIP, H.323, Microsoft Teams, and legacy VTC room systems.

## Designed for the workflows your government depends on

### Sensitive internal collaboration

Support classified briefings, ministerial discussions, incident response, and programme leadership. No third-party access to call content, metadata, or participant data — fully within your own infrastructure.

### Citizen-facing video services

Deliver accessible, no-download video for benefits, healthcare, legal, and social services without exposing citizen data to third-party platforms. Fully GDPR-compliant, with citizen data processed and stored entirely within your infrastructure.

### Cross-agency collaboration

Connect ministries, regional bodies, and municipal offices securely without routing sensitive traffic through commercial infrastructure. Interoperates with existing VTC room systems and Microsoft Teams so every agency can join regardless of their setup.

# Enterprise-grade security. Government-grade control.

A sovereign-ready alternative to generic meeting tools, with the operational maturity that government environments require.

## Data protection, encryption & privacy

- ✓ Meeting content, metadata, and logs stay entirely within your infrastructure
- ✓ FIPS 140-3 validated encryption
- ✓ TLS 1.2/1.3 + SRTP/DTLS-SRTP — full media and signalling encryption Per-meeting encryption keys and classification labels
- ✓ No third-party access, no external processing, no shared cloud storage

## Deployment sovereignty

- ✓ On-premises, private or sovereign cloud, or fully air-gapped
- ✓ Customer-owned keys and policy
- ✓ No external cloud dependency — GAIA-X friendly
- ✓ Hybrid deployment across private cloud and on-prem

## Regulatory compliance & certifications

- ✓ ISO/IEC 27001 and ISO/IEC 27701
- ✓ FIPS 140-3, ANSSI, ENS
- ✓ GDPR data residency and minimisation
- ✓ NIS2 and ENISA best practice alignment
- ✓ Documentation available for security review and tender submissions

## Identity & access management

- ✓ SAML 2.0, LDAP, national eID schemes, MFA
- ✓ Attribute-Based (ABAC) and Role-Based Access Control (RBAC)
- ✓ Zero trust access: control by identity, device, role, and policy
- ✓ SSO support and complete audit trail (ISO 27001 / NIST 800-53)

## Network & interoperability

- ✓ SIP/H.323, WebRTC, Microsoft Teams, Cisco CMS
- ✓ Cloud Video Interop for legacy VTC room systems
- ✓ Open APIs and SDKs for workflow integration Works in low-bandwidth or disconnected environments

## Manageability & visibility

- ✓ Central admin portal for monitoring, audit, and reporting
- ✓ Full visibility into call quality and security events
- ✓ Secure web scheduling, or schedule directly from Outlook
- ✓ Branded, accessible interface with custom logos, colours, and language

## Flexible deployment options

### Private or sovereign cloud

Fully managed with global availability, jurisdictional data sovereignty, and operational autonomy.

### On-premises

Complete control with on-premise deployment. Hybrid across private cloud and on-prem supported.

### Air-gapped

No connection to public networks. Ideal for the most sensitive classified or restricted environments.

## Trusted by governments, defence agencies, and public institutions across Europe.

Pexip provides secure video collaboration for the entire public sector — from sensitive ministerial meetings and cross-agency programmes to accessible citizen-facing digital services. Delivering complete data control for administrations, proven resilience, and interoperability with the tools your organisation already uses.
