

Pexip for U.S. Government & Public Administration

Secure, controlled, and interoperable video collaboration for U.S. federal, state, and local government.

In U.S. government, collaboration demands more than convenience — it demands control.

From inter-agency briefings to citizen-facing digital services, video is now a critical channel for how government agencies operate, serve, and collaborate.

Built for U.S. federal, state, and local government, Pexip deploys within controlled infrastructure — from FedRAMP-authorized government cloud to fully air-gapped on-premises deployments — delivering data control, regulatory compliance, and seamless interoperability with the platforms agencies already use.

Your meeting. Your data. Your control.

Pexip Secure Meetings gives U.S. government organizations secure, scalable, interoperable video — on their terms.

Controlled

Deploy in FedRAMP-authorized Pexip Government Cloud, your preferred private cloud, or fully on-premises — with complete ownership of data, infrastructure, and access policy. No dependency on uncontrolled third-party infrastructure.

Resilient

Maintain call quality and service continuity when it matters most. Built to handle network disruptions, demand spikes, and changing operational requirements without compromising performance.

Interoperable

Connect meeting rooms, video systems, and collaboration platforms without replacing existing infrastructure. Native support for SIP, H.323, Microsoft Teams CVI, and legacy VTC room systems.

Designed for the workflows your government depends on

Sensitive internal collaboration

Support classified briefings, ministerial discussions, incident response, and programme leadership. No third-party access to call content, metadata, or participant data — fully within your own infrastructure.

Citizen-facing video services

Deliver accessible, no-download video for benefits, healthcare, legal, and social services without exposing citizen data to third-party platforms. Data processed and stored entirely within controlled government infrastructure.

Cross-agency collaboration

Connect federal, state, and local offices securely without routing sensitive traffic through commercial infrastructure. Interoperates with existing VTC room systems and Microsoft Teams so every agency can join regardless of their setup.

Enterprise-grade security. Government-grade control.

A FedRAMP-authorized alternative to generic meeting tools, with the operational maturity that government environments require.

Data protection, encryption & privacy

- ✓ Meeting content, metadata, and logs stay entirely within your infrastructure
- ✓ FIPS 140-3 validated encryption (NIST certified)
- ✓ TLS 1.2/1.3 + SRTP/DTLS-SRTP — full media and signalling encryption
- ✓ No third-party access, no external processing, no shared cloud storage

Deployment sovereignty

- ✓ Pexip Government Cloud (PGC) — FedRAMP Authorized at Moderate Impact Level
- ✓ Private cloud — fully managed in your preferred private cloud
- ✓ Self-hosted on-premises or fully air-gapped
- ✓ Hybrid model spanning PGC and on-premises
- ✓ Customer-owned keys and policy

Regulatory compliance & certifications

- ✓ FIPS 140-3 — Federal Information Processing Standard (NIST)
- ✓ UC APL — Unified Capabilities Approved Product List (DISA)
- ✓ Secure Software Development Attestation (CISA)
- ✓ Microsoft-certified Cloud Video Interop (CVI) for Microsoft Teams
- ✓ Documentation available for security review and procurement submissions

Identity & access management

- ✓ SAML 2.0, LDAP, CAC/PIV card support, MFA
- ✓ Attribute-Based (ABAC) and Role-Based Access Control (RBAC)
- ✓ Zero trust access: control by identity, device, role, and policy
- ✓ SSO support and complete audit trail (NIST 800-53 aligned)

Network & interoperability

- ✓ SIP/H.323, WebRTC, Microsoft Teams, Cisco CMS
- ✓ Cloud Video Interop for legacy VTC room systems
- ✓ Open APIs and SDKs for workflow integration
- ✓ Works in low-bandwidth or disconnected environments

Manageability & visibility

- ✓ Central admin portal for monitoring, audit, and reporting
- ✓ Full visibility into call quality and security events
- ✓ Secure web scheduling, or schedule directly from Outlook
- ✓ Branded, accessible interface with custom logos, colours, and language

Flexible deployment options

Pexip Government Cloud (PGC)

FedRAMP® Authorized at Moderate Impact Level. SaaS secure video and VTC interoperability. Microsoft-certified CVI for Teams

Private Cloud

Fully managed deployment in your preferred private cloud. Operational autonomy and jurisdictional data control.

Self-hosted on-premises

On-prem or air-gapped. Supports Microsoft CVI at IL4-IL7. Hybrid model with PGC supported

Trusted by government agencies and public institutions across the United States.

Pexip provides secure video collaboration for the entire public sector — from sensitive inter-agency meetings and classified briefings to accessible citizen-facing digital services. Delivering complete data control for agencies, proven resilience, and interoperability with the tools your organization already uses.
