

Maximize the value of your Microsoft Teams investments

Pexip Connect for Microsoft Teams connects all your devices and platforms, making meetings run smoothly every time

In today's fast-paced business environment, Microsoft Teams is the hub where work happens. As organizations expand their Teams Rooms footprints, however, meeting environments get more complex and not every room system, device, or external participant can connect smoothly.

Ensure a Teams-first experience for everyone, everywhere

Take the friction out of meetings with Pexip Connect for Microsoft Teams. Pexip brings together all your platforms and devices, ensuring that your meetings just work. Users connecting from different devices or video systems get the same Teams-like layout and experience including raised hand indicators, active speaker highlights, and lobby notifications. Meanwhile, admins can easily and securely manage rooms from a single screen. Pexip also enables Microsoft Teams Rooms to connect to third-party meetings. This means organizations with a mix of legacy and modern room systems can keep them all connected and migrate to Teams Rooms at their own pace.

Everything you need for meetings in the cloud

Intuitive user experience

Empower users to join any Teams meetings from any device with one button.

Enterprise-ready

Enable administration and analytics of interoperable meetings providing real-time observability for meetings, usage, and devices. From a single place.

Greater ROI

Extend the life of your older systems and transition to Teams Rooms at your own pace without disruptions.

A secure solution certified by Microsoft

Pexip Connect extends Microsoft Teams to support any video endpoint — without compromising what makes Teams great. As a Microsoft-certified Cloud Video Interop (CVI) solution developed in close collaboration with Microsoft's engineering team, Pexip adds seamless interoperability while preserving the security, privacy, and reliability that Teams users already depend on. This ensures compatibility with new Microsoft releases and dependable support from both vendors.

Flexible deployment options that meet your organization's needs

Pexip delivers Teams interoperability on your terms: as SaaS, in a private cloud, or self-hosted all the way to air-gapped environments. It is the only Microsoft-certified CVI provider for U.S. government deployments at IL4–7, and the only solution with multi-tenant CVI capabilities that can support multiple Microsoft 365 tenants from one or more Pexip deployments. That gives customers unmatched flexibility to meet security, compliance, and operational requirements without sacrificing a simple, consistent Teams experience.
