SOLUTION BRIEF

INFINITY ENTERPRISE DIGITAL WORKPLACE

The sovereign digital workplace for defense

Secure meetings for HQ, ministries and industry partners, self-hosted and governed by your own policies.

Defense and intelligence organizations run a mix of room systems, modern collaboration platforms, and specialized infrastructure.

Pexip adds sovereign hosting, policy-based access control, and Microsoft-certified Teams interoperability, so HQ, ministries, and industry partners collaborate securely, without interruption.

Self-hosted on your own infrastructure, governed entirely by your own policies: on-premises, sovereign cloud, or fully air-gapped.

Sovereign, resilient, interoperable

Pexip delivers secure meetings for the defense digital workplace, on your terms.

Sovereign

Self-hosted on your own infrastructure: on-premises, sovereign/private cloud, or fully air-gapped. Data, keys and governance stay within national borders.

ABAC/RBAC policy enforcement: access governed by identity, attributes, role and classification, not just network location.

Resilient

No external cloud dependency; complete control over updates, integrations and auditability.

Pexip Private AI: self-hosted captioning, translation and secure transcript handling, all inside your own environment.

Interoperable

Teams & VTC interoperability (Pexip Connect): connects Microsoft Teams, SIP/H.323, Cisco and Poly devices. No rip-and-replace.

Secure chat, for example Mattermost and Rocket. Chat, plus open REST APIs and SDKs for deep integration.

Secure meetings across the digital workplace

1

Defense enterprise

Connect rooms, people and platforms across ministries and HQ while enforcing zero-trust access and data-sovereignty policies.

2

Industrial collaboration

Add secure unified communications to digital engineering and information-sharing environments across regulated defense supply chains.

3

Extending existing devices

Bring Skype for Business, Cisco and Poly room devices into Microsoft Teams-interoperable meetings without replacing the hardware in place.

Sovereignty & compliance

Deployment sovereignty

- ✓ Self-hosted: on-prem, private/sovereign cloud, or air-gapped
- ✓ Customer-owned keys; no external cloud dependency, GAIA-X friendly

Compliance & framework alignment

- ✓ Supports customer NIS2 and GDPR obligations; follows ENISA guidance
- ✓ ISO 27001/27017-aligned ISMS
- ✓ ACP 240; EU Data Act & GAIA-X
- ✓ Certified to ANSSI & ENS; NATO A2SL listed

Data protection & encryption

- ✓ FIPS 140-3; TLS 1.2/1.3 + SRTP/DTLS-SRTP
- ✓ STANAG 4774/4778 classification labeling

Access & interoperability

Identity & access management

- ✓ SAML 2.0, LDAP, national eID schemes, MFA
- ✓ ABAC/RBAC; complete audit trail (ISO 27001 / NIST 800-53)

Network & interoperability (Pexip Connect)

- ✓ Microsoft Teams CVI from existing room hardware
- ✓ SIP/H.323, Cisco and Poly VTC interoperability
- ✓ Skype for Business modernization, no rip-and-replace

Collaboration & AI

- ✓ Pexip Private AI: self-hosted captioning & translation
- ✓ Industrial CWE; secure chat, for example Mattermost and Rocket.Chat

Your mission. Your network. Your control.

Sovereign, resilient collaboration for the defense digital workplace, for HQ, ministries and industry partners, on your terms.
