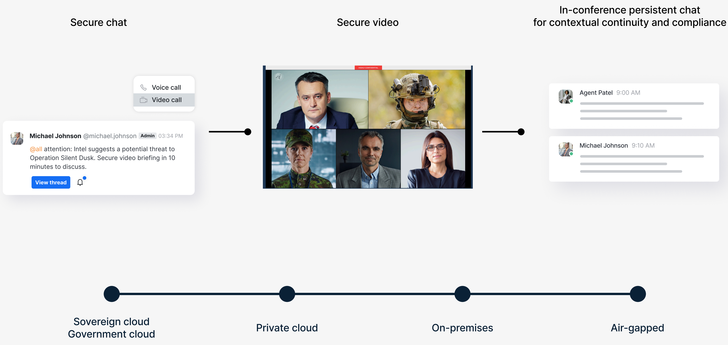
Mission-ready collaboration for defense, intelligence, and mission partners

Rocket.Chat and Pexip deliver a secure, full-stack collaboration solution — integrating chat, voice, video, and customer-controlled AI to keep decision-makers connected, informed, and in command.

Unified mission experience

Seamless chat → voice → video escalation for preserving context and enabling coordinated operations at scale.



Sovereign cloud
Government cloud

Private cloud

On-premises

Air-gapped

Operate with complete control

Maintain full command and resilience across your data, infrastructure, and communications

Flexible deployment

Operate in on-premises, sovereign, private, or air-gapped environments—including classified networks (NIPRNet, SIPRNet, JWICS).

Zero Trust access controls

Every identity verified. RBAC/ABAC and continuous threat detection ensure only authorized users access mission-critical communications.

Interoperability

Federate across classified and coalition domains with open standards. Integrate seamlessly with Teams, legacy systems, and partner networks.

Private AI

Run AI-powered features in secure, self-managed environments—preserving data sovereignty while enabling intelligent automation and operational insights.

Customizable and extensible

Adapt the platform to your mission with APIs, SDKs, and modular architecture—supporting custom workflows, branded experiences, and integration with mission systems.

Mission continuity

Operate in DDIL conditions with self-contained, offline-capable collaboration that keeps teams connected and missions moving—even when networks fail.

Tailored for every mission and operating environment

- Classified collaboration and mission planning
- Command-and-control operations
- Remote and disconnected environments
- Joint and coalition communications
- Cybersecurity and incident response coordination
- Research, development, and engineering collaboration

A leading U.S. defense contractor selected Rocket.Chat and Pexip to enable secure, air-gapped collaboration—providing fully on-premises messaging and video communication with no external dependencies. The solution delivers defense-grade security, scalable deployment, and seamless coordination across distributed mission teams.
